

ABSTRACT

The present invention relates to a novel chalcone compound represented by the following general formula:

wherein R₁ and R₂ are taken together with the carbon atom to which they are bound, respectively, to form a hydroxydimethyl hexane ring, or where R₁ is a hydroxyl group, R₂ is an isohexenyl group, a derivative thereof, or a salt thereof. Also, the present invention relates to a therapeutic agent or prophylactic agent for a disease requiring neuronal protection, suppression for nitrogen monoxide (NO) production, inhibition for aldose reductase or suppression for interleukin production, and a food, beverage or feed for treatment or prevention of the above-mentioned disease, characterized in that each comprises the above-mentioned compound as an effective ingredient.
